ORAL HYGIENE

NSK

Advanced oral care for dentists and hygienists

Removal of calculus and biofilm below and along the gum line together with tooth cleaning and polishing. Significantly improves the results of periodontal treatment.

NSK's wide range of oral hygiene products satisfies all these scenarios.

To maintain teeth in a healthy condition over a long period which is of great importance for patients.

NSK supports your daily clinical practice with effective and comfortable to use professional oral care equipment such as our high-performance ultrasonic and powder devices.

32 reasons to buy the Varios Combi Pro2

After listening to the needs of a broad range of dental professionals - we've crafted a combi-device that delivers the advanced functionality clinicians really want.

Combining subgingival and supragingival powder therapy, with ultrasonic scaling for periodontal treatment, the Varios Combi Pro2 is designed for ease of use, adapting to your preferred treatment style.

Born from NSK's wide range of experience and research, the Varios Combi Pro2 provides the professional care you have come to expect from NSK. With its durability and effortless maintenance, it is your perfect 'daily driver,' helping you perform routine dental work smoothly and efficiently - without interruptions.

With NSK by your side, you have the tools to perform at your very best - providing smooth, efficient care, from prevention to treatment, for every patient, every time.

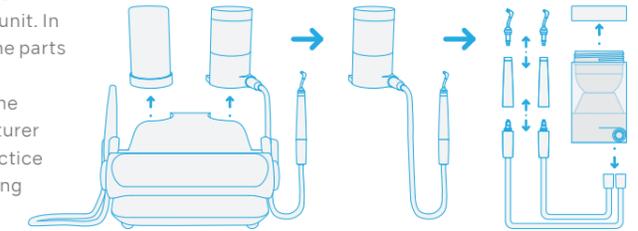

Constant availability

Independent unit & chamber

With the Varios Combi Pro2, all the powder guiding lines (powder chamber, hose, and handpieces) are separate from the main unit. In the unlikely event of powder clogging, the parts can easily be detached by hand. There is generally no need to dismantle or send the entire device to the supplier or manufacturer for repairs or part replacement. Your practice can therefore keep running and generating income - without interruptions.

The main unit's interior features a design based on a smart concept: having air and water circuits only.

No routine servicing required

As the Varios Combi Pro2 is designed for easy care and upkeep by you, regular maintenance by your local NSK service provider is not required. Practice downtime due to maintenance is therefore a thing of the past. Should the need arise, our friendly support team is always available.

Easy care

CLM mode

Cleaning the water circuit inside the unit is simple, using our b.clean solution and CLM mode setting, making the Varios Combi Pro2 compliant with European reprocessing requirements. As an additional built-in safety mechanism, the unit is set to disable regular use, until the chemical solution is fully drained.

Auto-cleaning Powder

Auto-cleaning Powder

Auto-cleaning Ultrasonic Scaler

Auto-cleaning Dual

Auto-Cleaning

The Varios Combi Pro2, has four auto-cleaning modes that can be run (as appropriate) after each patient session, or at the end of the day.

These avoid the need for a multitude of tools, while reducing the risk of powder clogging and water accumulation. They also keep the inside of the device clean at all times.

Patient comfort

Water heating system

The Varios Combi Pro2 is equipped with a water circuit heater for both the ultrasonic scaler and the powder handpieces. With the temperature of the injected water being approximately the same as that of the oral cavity - greater comfort for a wide range of patients is ensured, even those with sensitivity.

Ultrasonic scaler

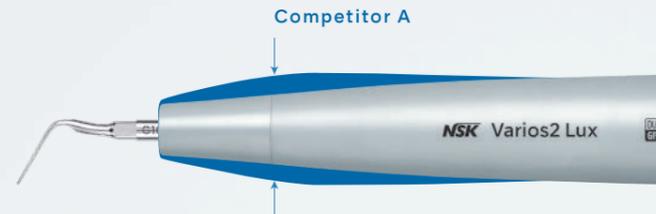

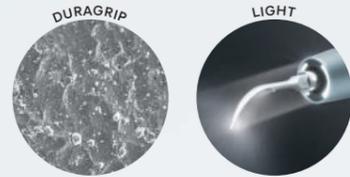

Made to last. Comfortable to use.

At NSK we do not compromise on quality. Our ultrasonic scaler handpiece offers great user-friendliness, comfort, durability, convenience, accessibility, and visibility.

Our Varios Combi Pro2 is equipped with our world-first ultrasonic scaler handpiece - made from pure titanium: heat and chemical resistant, and able to withstand multiple reprocessings and autoclave sterilisations.

In addition, to ensure great grip and stability, our scaler handpiece is finished with the highly regarded **DURAGRIP**, used in NSK's premium handpiece range.

This elegant, durable, well-balanced and lightweight scaler is comfortable to use, with long lasting performance.

Powder therapy

Slim, exchangeable nozzles.

Our powder handpieces and nozzles are designed to make your work easier and more efficient:

- Accessing the molar region is easier with the long, narrow nozzles.
- You'll experience excellent visibility and maneuverability within the oral cavity with the slim handpieces and nozzles.
- A wide operating field can be ensured on the lingual aspect without opening the lips wider than necessary on the buccal side.
- The nozzles are fully replaceable right at the chairside, making maintenance and repairs hassle-free.

Jet Nozzle for perio powder handpiece

In response to clinicians' demand, we've developed a Jet Nozzle for the Perio Handpiece - to be used in supragingival treatment. In addition to the previous Perio Nozzle, it is now possible to precisely target the appropriate area with this Jet Nozzle. These two types of perio nozzles can be interchanged depending on the desired application.

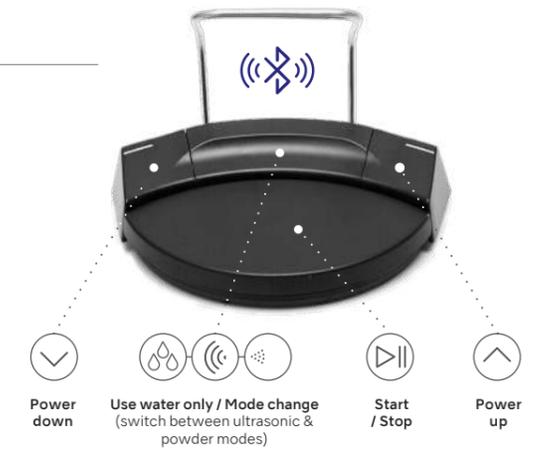

Operability

Wireless multi-function foot-control

Position the foot-control where it is most optimal for you, without concern for any limiting cords / cable lengths.

The Varios Combi Pro2 foot-control connects via Bluetooth®, and enables carefree and convenient operation using its multi-function control options - so you can concentrate fully on the treatment at hand.

iCart Prophy2 with water bottle kit*

Our specialised cart brings a new dimension of user-friendliness and convenience.

It can be fitted with an independent water-supply system; therefore, combining the Varios Combi Pro2 with the iCart Prophy2, enables you to treat patients in environments where external water availability or quality is a concern.

* Water bottle kit is optional

iPiezo engine®

The unique ultrasonic AI engine responds intelligently to tooth surface conditions

"I'd like to be better at scaling", "I'd like an easier way to remove deposits"
 We carefully considered the opinions of clinicians in the development of our unique next-generation AI ultrasound engine which is at the heart of the NSK ultrasonic series. The actions of the operator are transmitted accurately to the tip, as if it were an extension of the hand. This allows treatment to match tooth surface conditions. The result is faster and gentler treatment for patients and at the same time eco friendly as it operates efficiently with low power consumption.

Fitted with the next-generation ultrasonic AI engine, the iPiezo engine®

NSK's unique high-performance ultrasonic iPiezo engine allows for smooth operation as it transmits the operator's movements to the tip.

Feedback Function

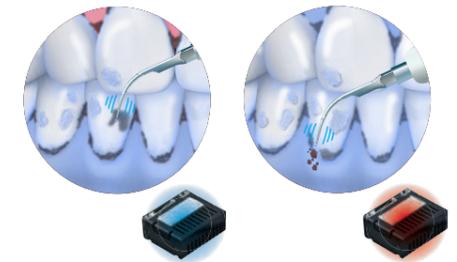

The NSK iPiezo engine supplies the appropriate power to the tip depending on the condition of the tooth surface. iPiezo engine provides a stable frequency output without dropping the power, even when removing hard calculus.

Auto Tuning Function

The Auto Tuning Function provides stable frequency to the tip at the selected power range. It allows the operator to feel the power output which ensures the optimum result.

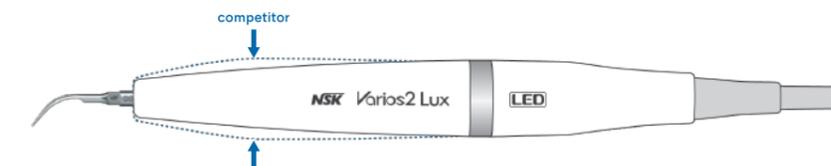

Allows for steady scaling

Conventional ultrasonic scalers lose power when moving from soft to hard tartar. The load on the end of the tip is automatically detected by the action of the iPiezo engine allowing for steady scaling without power-loss.

LED A slim highly-ergonomic LED handpiece

The ø9.5 mm slim tip of the Varios2 LUX handpiece makes it easy to operate throughout the entire oral cavity. The slim handpiece facilitates a smooth approach to difficult to access areas such as the molars. This provides freedom of movement in the oral cavity allowing the tip to be applied at the correct angle. The easy to grip ultra-light handpiece reduces strain on the hands and fingers. With a wide spectrum of close to natural light LED illumination, the view is always bright with high recognition capability.

Autoclave sterilisation and thermo-disinfection are both possible, delivering high safety standards

Sterilisation Case

The handpiece, tips and tip wrenches can be sterilized together for your convenience.

Varios Series Be Smart.

NSK offers a wider range of progressively intelligent ultrasonic treatments with our unique next-generation AI engine and 70 varieties of tips

Varios 970 Multifunction Portable Unit for Extreme Versatility

The smart compact design provides high-performance

The functionality required for ultrasonic applications is available in the most-advanced model in our compact series, the Varios 970. Our high-capacity 2 bottle system allows users to focus on safe treatment without worrying about water irrigation. Simple daily maintenance with auto rinse function and seamless body design. Through intensive study of user feedback we have managed to achieve high operability and safety.

Large LED Display

The large LED display has a 10 stage numeric power display and bar graph to show the irrigation volume. Beyond this, intuitive layout of operating keys minimize user errors. Power adjustment and function selection can be performed easily and reliably.

Large Solution Bottles

The two bottles can be placed and removed easily and can be used for any type of irrigation to complement treatment. Large 400 mL bottles deliver ample irrigation capacity and reduced chair time. Repeated tests of our components and material studies ensure high durability even when used extensively with antiseptic irrigation solutions.

Improved Durability Against Antiseptic Solutions

The introduction of the resin based water pipe of the bottle, pump and handpiece, assures dramatically improved durability as it substantially reduces the corrosion and rust caused by the residuum of antiseptic solutions.

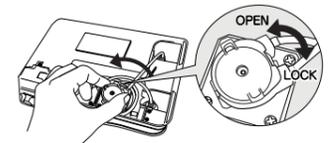

Auto Cleaning Mode

The Auto Cleaning Mode flushes the tubing, handpiece and tips at the push of a button when required. The two channels can be flushed independently.

Easy Replaceable Irrigation Pump

As you are able to replace the components of the irrigation system yourself, most issues can be dealt with on site.

Varios 970 Complete Sets

Optic	MODEL	ORDER CODE
●	VA970 LUX 230V S1	Y1004161
—	VA970 230V S1	Y1004160

Contents

- Control unit • Handpiece • Handpiece cord • 3 Scaling tips (G4, G8, G16)
- Foot control (FC-70) • 2 x Irrigation bottles • 3 x Tip wrench with torque limiter
- AC power cord • Sterilisation case

Specifications

- Power supply : AC 230 V 50/60 Hz
- Frequency : 28-32 kHz
- Max. output : 11 W (G mode)
- Dimensions : W 160 x D 270 x H 190 mm (Including bottle)

Tip Variation

NSK Offers A Wide Choice of Ultrasonic Scaler Tips For Clinical Applications

There is a wide range of tip line up that can be selected by case and the state of the adhesive material.

Varios Series

Scaling / Perio tip cross section & characteristics of the tip types

Varios tips have distinct appearances, and also different cross-sections, component materials and surface finishes. The tip is selected by case and the state of the adhesive material. This makes for effective use without undue impact on the tooth surface or soft tissue.

Cross-section / tip	Material / tip end	Results of scaling treatment	Kind to teeth	For
G1, G5, G6 G8, G9, G16	Metallic mirror finish	⊙	△	Scaling at and below the gumline
P1, P20 P21R/L, P25R/L	Metallic mirror finish	△	⊙	Stain removal at and below the gumline / maintenance
P1D, P2D, P3D	Metal diamond machining	○	○	Scaling below the gum line (adjacent surface / bifurcation)

Cross-section / tip	Material / tip end	Results of scaling treatment	Kind to teeth	For
P10 P11R/L, P26R/L	Metallic sharp edge	⊙	△	Scaling below the gumline
P40, P41	Metallic, lateral tip, two point water irrigation	△	⊙	Irrigation
V-P10, V-P11R/L V-P12, V-P26R/L	Plastic	○	○	Prosthetic repair work Implants

Ti-Max S970 Air Scalers

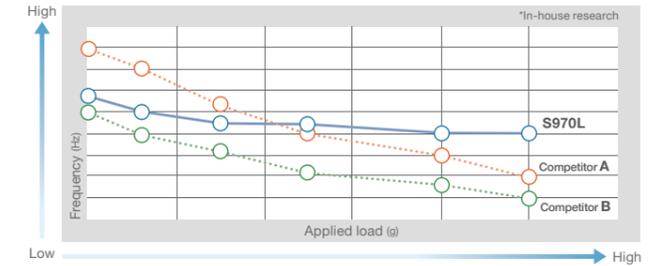

Air Scaler Evolution Supporting a Broad Spectrum of Care

The S970 air scaler offers a wide power range with easy swivel power adjustment and an extensive tip range for a wide variety of applications ranging from general scaling and root canal irrigation to minimally invasive procedures. The wide range of applications, comfortable grip and ease of maintenance makes the S970 air scaler the instrument of choice for dentists and hygienists alike. A titanium body, sleek and seamless design make the S970 really comfortable to hold even during long procedures whilst allowing for excellent visibility of the operating site at all times.

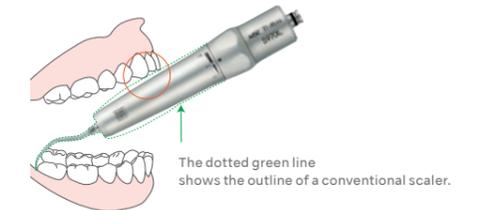

Steady power supply to the tip

S970 air scalers provide stable power output and constant oscillating movement across the entire power range at approximately 6,000Hz. S970 air scalers are extremely gentle and therefore very popular in cases involving perio or high sensitivity.

Excellent visibility

The sleek design of the S970 allows for unrestricted visibility of the treatment area and excellent access to even the most hard to reach areas.

Smooth and easy power control ring

NSK Power Ring offers three different power level settings for diverse clinical needs. While the gentle minimum mode is for delicate procedures, the maximum power mode is good for general scaling.

- Titanium Body with Scratch Resistant DURACOAT
- 3 level Power Ring • Cellular Glass Optics

Applications	Tips	Power Ring Setting		
		1	2	3
Scaling	S1, S2, S3	[Full range bar]		
Perio	S10, S20, S21R, S21L	[Low to High bar]		
Perio (Maintenance Tip)	S35+V-Tip (V-P10, V-P11R, V-P11L, V-P12)	[Low to High bar]		
Restorative (For Preparation of crown cores)	S81D, S82D, S83D, S86D, S71D, S72D	[Low to High bar]		
Restorative (For Minimal Intervention)	S65D, S66D, S67D, S68D	[Low to High bar]		
V-TIP SYSTEM (Endodontics)	S75+V-Tip (V-U15-V-U35)	[Low to High bar]		

The above power level is standard. Please start use from a low level to correspond to the symptoms.

Tip Variation

NSK Offers A Wide Choice of Air Scaler Tips For Clinical Applications

There is a wide range of tip line up that can be selected by case and the state of the adhesive material.

Scaling

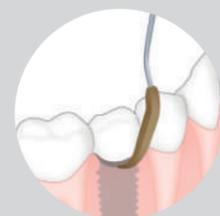

Removal of sub gingival calculus

Perio

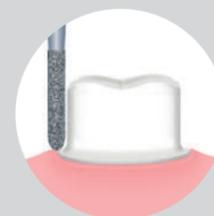

Removal of gingival biofilm

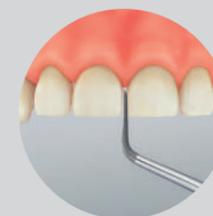

Maintenance of prostheses and implants

Detailing and finishing

Used for the final finish margins

Preparation of interproximal areas

The tips can be used for finishing margins after prepping the area with a conventional dental bur. That enables you to finish minute sharp edges and gingival sulcus without damage, something that cannot be accomplished with rotary instruments alone. The torpedo shaped tip is suitable for the final formation of an adjacent surface margin such as for laminated veneers. Low risk of excessive grinding and dentin exposure enables more conservative formation of the adjacent surfaces.

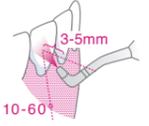

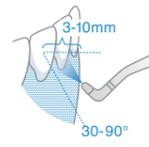

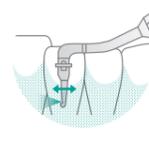

See Tip guide for details.

Powder Therapy

For long lasting, beautiful and healthy teeth

NSK powder therapy enables non-contact cleaning even in locations where deposits can't be removed as direct contact equipment tips, such as scalers, cannot reach them. Wide-ranging usability above and below the gumline, together with extensive powder discharge minimises clean-up of biofilm or plaque spillages. Considerably reduces chair time whilst increasing effectiveness. Comfortable for the operator and for the patient.

FLASH pearl Cleaning Powder

Outstanding Cleaning Results with Gentle Powder

Not salty! The powder has less impact due to the delicate flavour and provides patients with gentle tooth surface cleaning. The secret behind intense cleaning and a smooth finish? Calcium-based spherical particles. Fine powder with an average particle size of 54 μm move as if rolling across the surface of the tooth, limiting damage to the tooth surface and rapidly removing plaque and stains. The "FLASH pearl" treatment is effective in a short space of time which encourages patients to schedule regular cleaning appointments.

Sparkling results every time

FLASH pearl, a cleaning powder for Prophy-Mate neo and Varios Combi Pro2, is a spherical particulate powder designed to roll smoothly over tooth surfaces and penetrate all corners for rapid cleaning. The spherical shape of the powder granules lessens the likelihood of damage to teeth and soft tissue while removing stains and plaque quickly and safely.

☆ Adverse reactions to this product are rare.

Fast cleaning in tight spaces

The nozzle is held close to the tooth surface at an angle close to horizontal (10° to 60°) and maneuvered in an intricate motion as if the powder is moving across the tooth surface. The wide discharge angle and freer range of discharge motion allow for smooth operation and contribute to improved treatment efficiency.

☆ Please do not apply directly to the gumline.

Zero salinity, gentle ingredients with low impact on patients

As the powder is composed of 94% calcium carbonate, it is not unpleasant for your patients and absent in any salt-like taste. There's no need to worry about patients on restricted salt diets.

Clogging is also minimised

The fine powder particles don't dissolve easily in water so clogging is reduced. Maintenance of equipment is easy as there is less powder build-up inside instruments.

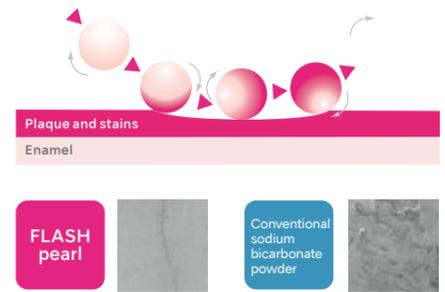

Features

- Supragingival application
- Principal ingredient is calcium carbonate. Non-flavoured.
- For all grades of stain and discolorations; with special efficiency in strong stains
- Sodium-free, so no unpleasant salty taste and ideal for patients on sodium-restricted diets
- Spherical granules are gentle on tooth surface

SOFT pearl Cleaning Powder

Optimised Powder Action for Mild to Moderate Stains

Effective against mild to moderate stains. Powder particles are optimised for ideal, time-delayed water solubility. The powder should not dissolve too quickly in water or high humidity, yet must dissolve completely when disposed of through dental chairs to prevent blockage of amalgam separators or wet suction.

For supragingival application.

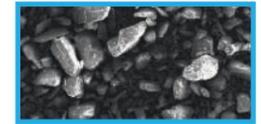

The powder consists of particles which are kind to the tooth surface

The Supragingival powder consists of tiny particles that roll across the tooth surface gently and quickly removing stains and plaque. Powder particles are optimized for ideal, time-delayed water solubility.

The powder should not dissolve too quickly in water or high humidity, yet must dissolve completely when disposed of through dental chairs to prevent blockage of amalgam separators or wet suction.

Average particle size: 65µm

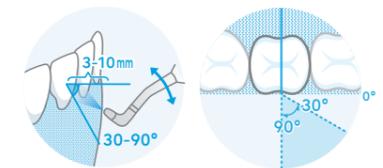

Powerful and continuous powder spraying

Fluid analysis developed through our turbine development technology has resulted in powerful yet stable jetting, with minimal powder loss. Enables a reduction in treatment time due to high-powered continuous jetting and polishing capabilities.

A reliable design that is resistant to powder clogging

Clogging is reduced as the powder particles are extremely fine and water-soluble. This reduction in internal powder clogging significantly improves reliability.

For Supragingival

Features

- Supragingival application
- Principal ingredient is glycine, an amino acid present in proteins.
- Effective for mild to moderate staining.
- Suitable for heavy users employing an amalgam separator or wet suction.
- Can be used on primary teeth ("milk teeth").
- Does not necessarily require polishing after treatment.
- Pleasant, neutral-sweet taste
- Vegan friendly: fluoride free

Prophy-Mate neo Air Powered Tooth Polishing System

Prophy-Mate neo, the best polishing tool for beautiful white teeth

Supragingival powder polishing is highly effective when used in combination with "FLASH pearl" and "SOFT pearl." NSK's unique twin nozzle achieves powerful powder discharge.

The long and slim handpiece in conjunction with the small nozzle tip dramatically improves accessibility around all tooth surface.

Cleaning can be performed quickly even in interproximal areas teeth and in usually difficult to reach areas.

The ergonomically designed grip is comfortable to hold and allows for flexible operation.

Improved Polishing Power

With NSK original twin nozzles, greater polishing power is realized. With powerful jet, cleaning time is greatly shortened thus reduces treatment time.

Easy Detachable Nozzles with 60° and 80°

Selectable 60° and 80° nozzles maximize the cleaning ability. 60° nozzle works especially well for molar area and occluding surface and 80° nozzle for anterior tooth.

Smooth, Easy 360° Swivel

Twin joints rotate smoothly 360 degrees for easy operability, responding flexibly to minute fingertip movements with effortless adjustment of the nozzle angle.

Simple One-touch Connection

The Prophy-Mate neo is designed for a one-touch attachment to NSK couplings and other major coupling brands. The handpiece also can be attached to the powder case with one-touch operation.

Perio-Mate Biofilm Eraser

Extensive range of applications ranging from supragingival to subgingival use

By removing the Perio Mate Nozzle Tip, the subgingival area up to 3 mm from the gum line that requires the most frequent maintenance can be treated. In addition, there is a powder flow rate adjustment function to match operational site conditions, to enable a wide range of possible treatments from fast precise removal of biofilm to gentle and efficient biofilm removal around implants and in the delicate periodontal pocket.

Powder Pro Care, Above And Below The Gums

Efficient professional care that's kind to teeth. It is easy to install powder therapy alongside existing facilities.

- The "handy type" can be connected to the chair unit during use in one action.
- The nozzle tip is designed for safety and operability.
- The powder flow channel is short and direct with low risk of blockage.
- Fast and effective biofilm removal.

Powder flow volume adjustment

The Perio-Mate's convenient Powder Control Ring makes fine-tuning powder flow simple and intuitive with quick fingertip adjustments. In addition to easily controlling and stopping the flow of powder in this way, you can cleanse the treatment area from biofilm uninterruptedly.

Smooth 360-degree rotation for safe and accurate operation

The handpiece can easily be rotated using the fingertips even while performing complex operations. The nozzle tip allows easy access to difficult to reach areas, and does not adversely affect neighbouring teeth and contours.

Slim nozzle facilitates operation in the narrow confines of the oral cavity

The long, narrow nozzle shape is designed to allow easy access to areas that require inserting the handpiece at an angle, such as between molars.

Product maintenance

The user can easily disassemble the nozzle, handpiece and powder case. Powder clogging is unlikely when handled and maintained correctly but is easy to manage by following the maintenance guidelines and the relevant accessories included with the product. All the parts of the handpiece (other than the nozzle tip) can be repeatedly cleaned ultrasonically or sterilized in an autoclave.

Supragingival

Removal of plaque biofilm from the gingival margin
(up to approximately 3 mm inside the pocket) *Detach nozzle tip

Removal of plaque biofilm at interdental and gingival margin

Before

In use

- Easier to remove biofilm plaque and minor stain around supragingival and gingival margin.
- Enable to remove plaque and biofilm from crowded dentition, interdental and pit and fissure, where hardly accessed with rubber cups.
- Removal of minor stain attached extensively.
- Cleaning around dental implants and prosthetic restorations.
- Less of burden to teeth and gums due to non-contact method.

Subgingival

Erasing biofilm in periodontal pocket
from 3 - 6 mm below the gingival margin

Removal of biofilm in dental pocket

Before

In use

- Deposits can be removed without direct contact with almost none of the extensive biofilm and plaque adhesion remaining and the results are effective. It is possible to clean areas the tip cannot reach with the powder injection effect.
- Optimised the flow of powder based on fluid analysis.
- Compared to other maintenance equipment, less biofilm and plaque remains with wide powder dispersal, even in areas that cannot be seen.
- Smooth powder injection ensures gentle treatment in the periodontal pocket.
- Flexible plastic nozzle tip design ensures accessibility and is gentle to the pocket.

Performance & Technology

NSK's innovative nozzle tip

NSK's new nozzle tip design incorporates semitransparent materials that promote greater visibility during procedures. Hygienic single use tips mean enhanced usability and safety.

Flexible plastic nozzle tip design ensures accessibility and is gentle to the pocket

The slim nozzle tip possesses just the right degree of flexibility to pass smoothly over tooth surfaces, and can be easily inserted into tight pockets and the root surfaces of adjacent teeth without causing the patient discomfort.

Optimised using powder flow analysis

Turbine development technology uses accumulated fluid analysis which allows 'spraying' that takes into account the powder flow in the pocket. It is not mono-directional, rather the flow is even and all-directional, minimising soft-tissue damage and subgingival plaque and biofilm can be removed efficiently. With respect to potential damage, powder (air) and water are separately discharged onto periodontal tissue.

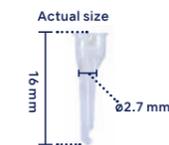

Perio Mate Nozzle Tip

- Disposable
- Sterile
- Individually packaged

Contents
• 40 nozzles

iProphy Cordless Polishing Handpiece

Put The Control Back in Your Hands.

With no foot control, the cordless iProphy from NSK gives you maximum freedom and stability for smoother polishing and greater control. Take your clinical practice to the next level by improving your performance day after day.

An ultra mini head guarantees the best possible field of vision

The thin, long ultra mini head ensures a wide field of vision within the oral cavity, easy access and excellent reach. Facilitates even smoother and more precise treatment.

Easy power control

Power control at your fingertips. No foot-control required. iProphy easily maintains low speed rotation, which can be difficult with conventional contra-angles.

Lightweight and easy to hold

Ergonomically-designed and developed to include the latest ergonomic features. The lightweight, easy to hold and well-balanced handpiece feels light in the hand even when used for a long time.

Simple head switching

Simple head switching using the quick joint system. In addition, operability is vastly improved because the head can be positioned in six different angles to best suite different procedures and easily access all areas of the oral cavity.

The M.I.T. journey

SCREEN / ASSESS

Check risk factors:
Systemic, local and lifestyle factors

Full intraoral & extraoral exam / analysis

Initiate patient engagement

Diagnosis & treatment planning

SUPRAGINGIVAL TREATMENT

Diagnosis:
Gingival health
Gingivitis
Periodontitis
Peri-implant health
Peri-mucositis
Peri-implantitis

Aim:
Disrupt biofilm
Remove stains
Reduce inflammation
Engage patient

Treatment options:
Supragingival / mucosal biofilm disruption, PMPR* & plaque retentive factor management: Powder therapy, Piezo ultrasonic scaling / Air scaling, Hand-instrumentation, Polishing & Rotary instruments

Decide way forward:
If healthy: Repeat Step 0/1
If stable: Step 4
If unstable & engaged: Step 2
If unstable & non-engaged: Repeat Step 1

PRODUCTS AVAILABLE TO STEP 1

SURGICAL TREATMENT

Next steps:
If stable: Step 4

Treatment options:
Bone remodelling, regeneration, and hard & soft tissue grafts

Aim:
Reduce pocket depth. Tissue defect(s) managed. Stabilise active disease.

Diagnosis:
Sites requiring surgical treatment

Next steps:
If stable: Step 4
If unstable: Repeat Step 2, or move to Step 3

Treatment options:
Subgingival / Submucosal PMPR:
Powder therapy, Piezo ultrasonic scaling / Air scaling & Hand-instrumentation

Aim:
Disrupt biofilm. Removal of plaque retentive factors. Inflammation and pocket depth reduction. Continued patient engagement.

Diagnosis:
Periodontitis / Peri-mucositis / Peri-implantitis

SUBGINGIVAL TREATMENT

PRODUCTS AVAILABLE TO STEP 3

PRODUCTS AVAILABLE TO STEP 4

PRODUCTS AVAILABLE TO STEP 2

SUPPORTIVE CARE

Diagnosis:
Stable periodontitis & stable implantitis

Aim:
Sustained stability & engagement, after successful completion of active treatment.

Treatment options:
Supragingival / mucosal biofilm disruption, PMPR* & plaque retentive factor management: Powder therapy, Piezo ultrasonic scaling / Air scaling, Hand-instrumentation & Polishing

Next steps:
Schedule continuing care every 3-12 months (according to the patient's needs). A perio patient never ceases to be a perio patient.
